Camel Case for Variables and Functions: The first word is lowercase, and subsequent words are capitalized. For example:

firstName

calculateTotalPrice()

Pascal Case for Classes and Constructors: Each word starts with an uppercase letter. For example:

Person

CarModel

Uppercase for Constants: For constants that remain unchanged throughout the program, use uppercase letters with underscores separating words. For example:

MAX_SIZE

PI_VALUE

Avoid Reserved Keywords: Do not use reserved JavaScript keywords (like var, function, etc.) as variable names.

```
Function checkInt(value) {

  If (Number.isInteger(value)) {

    Console.log("It's an integer.");

  } else {

    Console.log("It's not an integer.");
```

```
    }

}

Let flag = true;

If (flag) {

    Console.log("Flag is true.");

} else {

    Console.log("Flag is false.");

}

Let myDouble = 3.14;

If (myDouble) {

    Console.log("The number is truthy.");

} else {

    Console.log("The number is falsy.");

}
```
